

VERIFY™

CUSTOM M&V MODELING SOFTWARE

Automate Energy Savings Modeling at the Meter

Verify is the scalable M&V software built to empower your team to efficiently conduct whole building (IPMVP Option C) M&V. It's not just a tool — it's your stable, automated approach to accurately measure savings, prove program cost effectiveness, and effortlessly meet regulatory demands.

Automate Your M&V, Scale Your Program Success

Streamline M&V for custom programs such as SEM and RCx, and track impact over time of incremental Energy Conservation Measures (ECMs). This automated platform is the powerful tool you need for more precise forecasting and smarter future program planning.

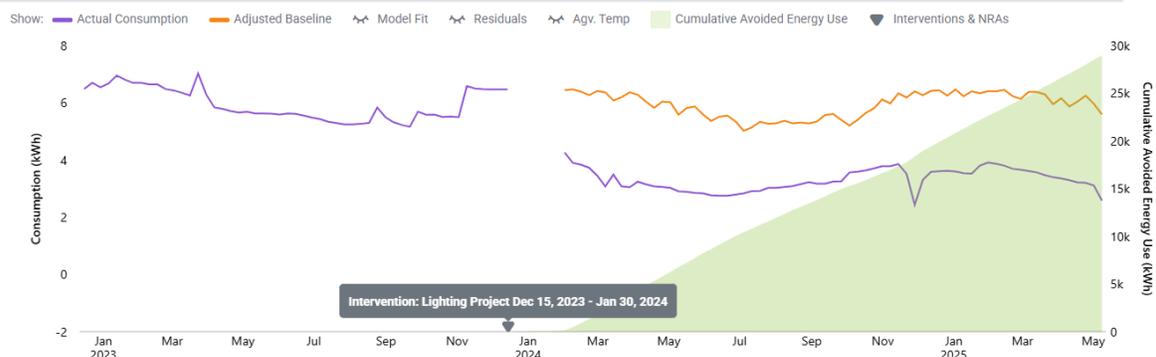

- Customizable Option C modeling with Non-Routine Event and Independent Variable capabilities give you a holistic, real-time view of your programs performance.
- Set recurring run schedules and create an unlimited number of energy saving models per site.
- Unlimited number of seats allows every stakeholder to view project saving results.

ESTIMATED ANNUAL ENERGY SAVINGS

218,750 kWh Estimated Annual Consumption 12% Savings

249,129 kWh Baseline Annual Consumption

Improve Portfolio Forecasting

- Automatically model a collection of projects across implementers to track your program's and portfolio's performance to inform long-term forecasting and budgeting.
- With automated modeling alerts, you can quickly identify underperforming projects that need additional NRE data or corrective improvements to increase energy savings.

Certified IPMVP Compliance

Guaranteed Adherence to International Standards

Verify delivers full support for whole facility regression modeling, ensuring your M&V processes meet the highest industry standards with unmatched precision and transparency:

- NMEC and IPMVP Option C compliant automated modeling with automated data collection and real-time validation
- Model energy saving projects using hourly, daily, or monthly data
- Complete audit trails for transparent savings calculations
- Normalized savings and avoided energy analytics
