

START SAVING. STOP WASTING.

No Cost.

No Equipment.

No Hassle.

Virtual Commissioning® (VCx®) is a fully funded service from your utility that helps participating businesses **cut their annual energy use by an average of 15%.**

We achieve this without selling hardware or asking for investment. Instead, we use your utility data to help you get better performance from the systems you already own. It's a risk-free way to lower your business costs without audits, construction projects, or headaches.

The VCx Difference

NO COST

The program is fully sponsored by your utility. You pay nothing.

NO EQUIPMENT

We focus on tuning your existing operations, not selling you new units.

NO SITE VISITS

The entire process is handled remotely. We never disrupt your business.

How It Works

- 1 We find the waste in YOUR building.** Our analysts review your specific smart meter data to spot where your business is bleeding energy and money. These aren't generic tips — we're looking at your actual heating and cooling patterns, your equipment schedules, and when your systems are running after you've locked up for the night.
- 2 You get an expert who learns YOUR operation.** A dedicated Power TakeOff Energy Advisor digs into your findings — not a template, but what's actually happening at your location. They'll walk you through what we found in your data and what it means for your specific setup.
- 3 Simple changes tailored to YOUR facility, real savings on YOUR bill.** We guide you through no-cost fixes based on how your business actually runs — maybe it's your thermostat schedule, maybe it's when your equipment powers down. You make the adjustments that fit your operation, and we verify that the savings appear on your utility bill.

TIME COMMITMENT

Less than 4 hours. Most business owners spend just 2–3 short calls with us.

We handle the analysis.

You make the decisions.

Common Questions

Q: Does this really cost me nothing?

A: Yes. The program is funded by your utility. There are no enrollment fees, hidden charges, or obligations to buy anything.

Q: Do I need to buy new LEDs or HVAC units?

A: No. VCx is about operations, not hardware. We help you run the equipment you already own more efficiently.

Q: How do I know it works?

A: We track your utility meter data after every change to verify the savings are real.

Power TakeOff is a trusted partner of more than 30 utilities across North America and has delivered virtual solutions to more than 144,000 utility customers.

“

We appreciated Power TakeOff's insightful electrical data analysis to identify and quantify simple improvements we could make to how we operate our systems. Since the cost-saving measure was identified for us, it made implementation easy. And with the dollar savings accurately estimated, it justified our staff taking time out of their usual responsibilities to make the improvements.
