

VERIFY™ M&V SOFTWARE

Changing the way organizations track and manage energy efficiency results.

Automate M&V to Save Time & Improve Accuracy

Intelligent Automation for M&V Precision

Empowering Your Workflow

Industry Standards

Built on IPMVP, DOE, and BPA modeling approaches.

User Defined Alerts

ML algorithms learn the unique fingerprint of your building's operation to distinguish between routine changes and systematic failures.

Simplify Data Collection

AMI, BMS, or monthly consumption data can be ingested via API or uploaded by the user.

Purpose-Built for Utilities and ESCOs

Verify Capabilities

Flexible Project Models

- Track equipment-level or whole facility energy savings.
- Set recurring run schedules and create an unlimited number of models per site.

Project Management

- Create and store your projects in a single software solution.
- Bring your team together on a single, browser-based platform to work on the same project, simultaneously.

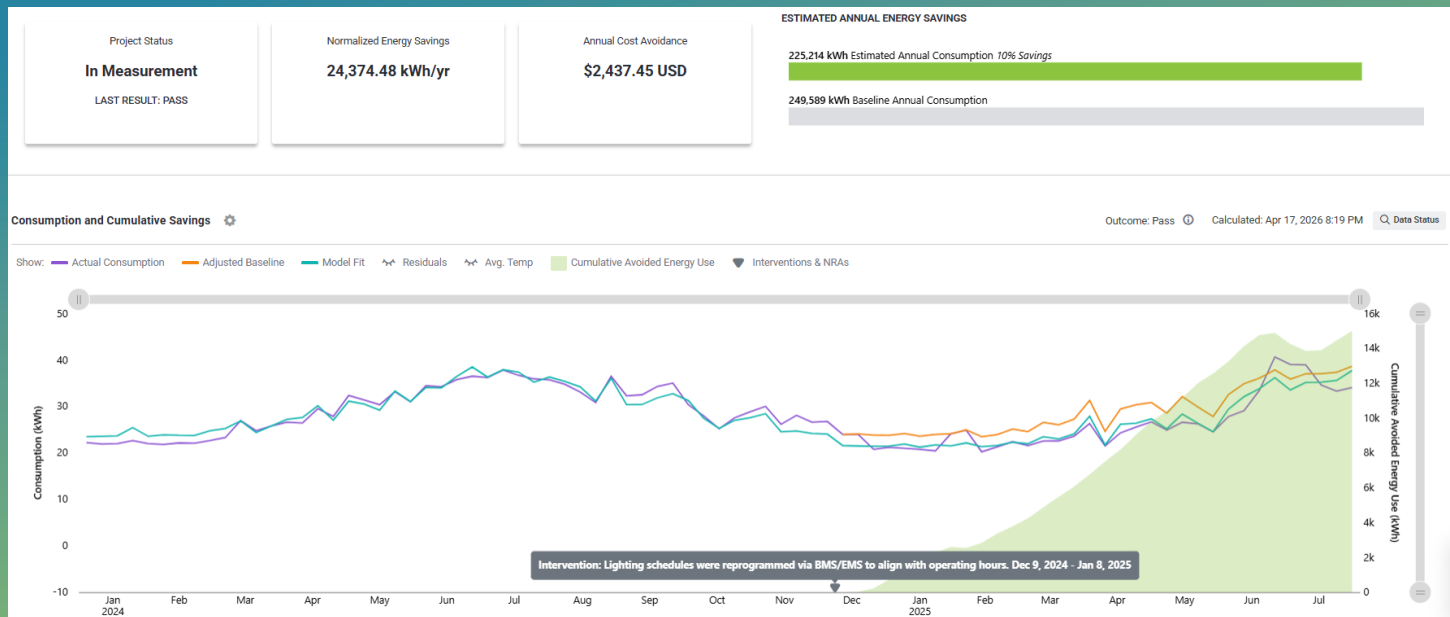

Project Savings Visualization

- Track all project savings and view recent results in a single dashboard.
- Track energy and cost savings, GHG reductions, and M&V results with an unlimited number of seats.

Automated M&V

- Replaces manual M&V work with 1-click automation, saving days of data scrubbing.
- Model projects with hourly, daily or monthly data.
- Easily isolate statistically significant variables and NREs for bulletproof M&V models.

Scalable, Repeatable & Accurate M&V Modeling

Leveraging Hourly, Daily or Monthly Data

Seamlessly model kWh, kW, gas, and solar using BMS, sub-metered, or whole facility consumption data.

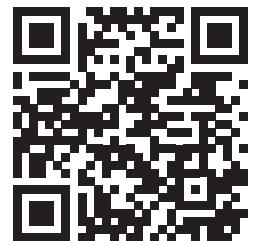

Proven Third-Party Evaluations

Verify is IPMVP compliant and proven accurate by utility partners and third-party evaluators.

Comprehensive User Support

Personalized software training, project set-up, tech support and ongoing feature improvements, ensuring the platform continuously improves for all of your energy modeling needs.

QUALIFIED COMPANY 2026

M&V SERVICES PROVIDER

Power TakeOff

United States

Canada

United Kingdom

Power TakeOff designed, built, and operates the industry's leading energy efficiency support platform to measure and prove savings achieved from energy efficiency projects across the U.S. and Canada. Power TakeOff's M&V platform has been field-tested by thousands of third-party evaluated IPMVP Option C models.
